TOUCH SYSTEMS

Complete solutions tailored to your needs

Touchscreens are employed in the widest variety of industries. Roos GmbH offers capacitive and resistive touchscreen solutions in accordance with the industry-specific requirements of the customer. From the creation of the design, through to the technical equipment, we offer a full service.

MEMBRANE KEYBOARDS

Customer-specific input systems

The use of innovative technologies enables us to develop and produce individual membrane keyboards in close cooperation with our customers. Whether it be insert strips, key illumination or the integration of touchscreens, we are able to implement any functional and design idea.

FRONT MEMBRANES

Durable and scratch-proof design

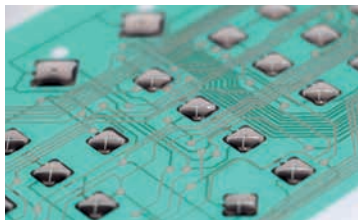

We produce front membranes coordinated precisely to your application needs, either as individual items or produced in series. Thanks to our comprehensive range of materials, our versatile printing technologies and surface finishing options, we are able to supply high-quality and extremely durable front membranes.

PRINTED ELECTRONICS

Printed electronic circuit boards

Screen printing can also be used for the manufacturing of many electronic application elements. We develop and produce various types of printed sensors, flexible circuits and insulation membranes.

HOUSING AND FRONT PLATES

Flat and round printing for individual products

With our modern machinery, we are able to print housings, bodies and front plates with even surfaces. Thanks to the high quality of our screens and the use of selected screen printing paints, we are able to create precise and durable printed results.
